

SINGLE SIGN-ON

Access Any time. Anywhere. Any device.

What is it?

Single Sign-On (SSO) is an authentication process that allows a user to access multiple applications or services with a single set of login credentials (such as a username and password). This simplifies the user's experience by eliminating the need to remember and enter different login information for each application, while also enhancing security and centralizing access control for the organization.

Fewer login-related help desk calls

Faster for users to adopt, log in, and use new apps

Faster IT integration with acquired businesses

Federated SSO

Single Sign-On to apps that support federated protocols such as SAML 2.0, OpenID, OAuth, CAS, WS Fed, and InCommon.

1

In-Built Library

Salesforce, Box, Banner, ADP, Dropbox & more – 1-click access to literally every app you need at work.

2

Role-Based Access Control

Effortlessly manage employee privileges with centralized management. Grant the appropriate level of access to each team member with ease.

3

Reporting and Analytics

Get actionable data to help you optimize your strategies and improve your user experience.

4

Custom Branding

Our custom branding options let you change the default design of the login page.

5

500+ Pre Built Adaptors

Single Sign-On to apps that support federated protocols such as SAML 2.0, OpenID, OAuth, CAS, WS Fed, and InCommon.

6

Enterprise Portal Integration

Streamlines the login process for users and enhances overall security measures.

7

Extensive Product Integration

With over 500 apps available in the app directory, secure any apps easily
